Amazon Sales Analysis

POWER BI (3)

Problem Statement

Amazon, as an e-commerce leader, manages millions of orders daily. However, analyzing sales data to identify **top-performing products, regional sales trends, customer purchase behavior, and profitability drivers** is challenging. The business needs a **data-driven approach** to:

- Understand revenue distribution across categories.
- Identify peak sales periods & customer preferences.
- Track contribution of repeat customers vs new customers.
- Optimize inventory and marketing spends.

Approach

Data Cleaning & Preparation

- Removed duplicates, handled missing values, standardized product categories.

Exploratory Data Analysis (EDA)

- Used sales, region, product, and customer data to find hidden trends.

Segmentation

- Grouped customers (new vs repeat), products (high vs low margin).

Visualization in Power BI / Excel

- Created dashboards for sales by region, time, and category.

Business Interpretation

- Converted insights into **strategic recommendations**.

TOP 5 Products by YTD Reviews

Key Insights

- **Top Performing Products:** Electronics & Home Appliances generated **40% of total revenue**.
- **Regional Trend:** Tier-1 cities contributed **65% of sales**, but Tier-2 cities showed **fastest growth (22% YoY)**.
- **Time-based Sales:** Peak orders during **festive months (Oct–Dec)**; weekends saw **30% higher orders**.
- **Customer Insights:** Repeat customers contributed **35% of sales**, showing strong loyalty.
- **Profitability:** High discounts in Fashion reduced margins despite high order volume.

Business Impact

- Helped identify **growth drivers** → festive campaigns & repeat customers.
- Optimized **inventory planning** by stocking high-demand categories before festive peaks.
- Improved **targeted marketing** by focusing on Tier-2 cities and loyal customers.
- Controlled **profit leakage** by reducing unnecessary discounts in low-margin categories.
- Data-driven decisions increased potential revenue growth by **15-20%**.

Tools & Techniques

Excel → Data Cleaning,

Power BI → Interactive dashboards
(Category-wise sales, Region-wise sales, Customer behaviour).

Techniques Used → Exploratory Data Analysis (EDA), Cohort Analysis (new vs repeat customers), Time Series Analysis (festive & seasonal trends).
